EDUCATION

Irvine Valley College | Irvine, CA

Computer Science coursework

Relevant coursework: Data Structures and Algorithms; CS50: Introduction to Computer Science — Harvard University

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, HTML, CSS

Web Development: Next.js, React, Tailwind CSS

Data and ML: pandas, Matplotlib, scikit-learn, Google Colab

Tools and Systems: Git, GitHub, SQL Server

TECHNICAL PROJECTS

ALGOKI — Programming Learning Platform | Creator | Apr 2025–Present

- Built an LMS with course discovery, enrollment, checkout, learner and instructor dashboards, course creation, lesson management, reviews, and progress tracking.
- Developed a responsive frontend using Next.js, React, TypeScript, and Tailwind CSS, with reusable components, Zustand, and TanStack Query.
- Designed programming-learning experiences around algorithms, animated lessons, quizzes, code grading, rankings, and online contests.

AI-R Quality — Air Quality Forecasting | Team Developer | Jun–Jul 2026

- Collaborated with a three-member team on an AI-powered air quality forecasting platform for Ho Chi Minh City residents; contributed web development for the dashboard.
- Integrated a teammate-developed stacked LSTM model into the platform; the team model used 35,064 environmental samples and achieved an R^2 score of 0.7962.
- Developed a five-tier AQI warning system to communicate pollution severity and support health recommendations; earned the EcoGen 2026 Best Environmental Impact Award.

TECHNICAL EXPERIENCE

AI Training Intern | HCMUTE, Faculty of Electrical and Electronics Engineering | Jul 2025

- Analyzed and visualized environmental datasets with Python, pandas, Matplotlib, and Google Colab; implemented regression, decision tree, and KNN models.
- Built and presented a mini AI project covering waste classification and plant-condition recognition during a five-session training program.

IoT Intern | Ho Chi Minh City University of Technology | Sep–Oct 2024

- Practiced Raspberry Pi setup and Linux administration using Raspberry Pi OS, SSH, UART, remote desktop, terminal commands, and Bash.
- Used Python for GPIO control, UART communication, and file I/O; practiced collecting and storing Raspberry Pi data in SQL Server and developing device interfaces.
